

A virtual companion mind to accelerate discovery

The problem: **Information overload** and **biological complexity** impede discovery

Is this you?

AI-ASSISTED DISCOVERY CAN HELP

Automated Literature Overview

Our Archimedes System gives you a quick visual overview of the contents of 100s of articles, like a "Google Map for Science".

Automated Hypothesis Generation

Our DeSciDe system helps you remove bias from creating new hypotheses based on your data by including biological information.

In Silico Experiments

Explore what-if scenarios to avoid investing money and time into the wrong experiments.

Intelligent Visualization

Make interdisciplinary research more efficient by showing information in the most effective manner for each field of science.

The Pathway to Turbocharge Your Science Begins Here

Unlock AI-Driven Discovery with DeepScience. Our pioneering AI systems revolutionize scientific exploration:

- **Archimedes:** Accelerate innovation with a visual "Google Maps for Science".
- **DeSciDe:** Remove bias and explore data-driven hypotheses.
- **In-Silico Experiments:** Accelerate breakthrough discoveries through what-if scenarios.
